Find the root cause

Automate everything

TRACING

Don't just observe. Take action.

Find and fix the problem, no matter where it occurs

With Tracing, see the complete, end-to-end path that data takes through your distributed system to pinpoint the exact origin of an issue. Navigate to a trace from a correlated metric, specific issue, or search.

Solve slow, fast

Investigate known problems

SESSION REPLAY

See what your users are seeing

Debug with visual context

Navigate your application's console output, network calls, and even inspect your application's DOM tree. It's like your browser's dev tools right inside Sentry.

Protect your users' privacy

See user frustration signals in the UX

Getting started with Sentry is simple

We support every technology (except the ones we don't).
Get started with just a few lines of code.

Next.js

Signup and install Sentry with just one line of code:

```
npn @sentry/wizard@latest -i nextjs
```

That's it. Check out our [documentation](#) to ensure you have the latest instructions.
